SKILLS

Programming & Databases: Python, SQL, PostgreSQL, SQLite, Pandas, NumPy
Data Engineering Tools: Apache Airflow, Docker, Git, GitHub Actions, Google Cloud Storage
Analytics & Visualisation: Power BI, Tableau, Streamlit, Plotly, Microsoft Excel

PROJECTS

AfroSurvey Intelligence Platform – Data Lakehouse & Analytics **(Python | SQL| Streamlit)** **Github Repository** June 2026

- Collaborated on the analytical design of a multi-country survey intelligence platform built around a Bronze–Silver–Gold data lakehouse architecture.
- Defined business questions, key performance indicators (KPIs), and dashboard requirements to guide analytical outputs and reporting.
- Contributed reporting requirements for survey participation, data quality, and governance, connecting business needs with the platform's analytical outputs.
- Gained exposure to a data engineering architecture integrating ingestion, PySpark transformations, Airflow orchestration, and downstream analytics.

Stock Market Analysis Dashboard – Financial Analytics **(Python | SQL| Streamlit)** March 2026

- Developed a Python ETL pipeline to extract daily market data for over 50 actively traded stocks, transform raw records, and prepare structured data for downstream analysis.
- Implemented data cleaning and validation to standardise ticker symbols, company names, prices, percentage changes, and timestamps while filtering invalid records and removing duplicates.
- Designed SQL-based storage workflows with separate raw and cleaned stock tables, using a unique index on ticker and timestamp to support record integrity.
- Automated daily pipeline execution using GitHub Actions and integrated stored data with an interactive Streamlit dashboard for market trend analysis.

Automated SIM Registration System - Telecommunications Analytics **(Python | SQL| Streamlit)** January 2026

- Developed a web-based registration system to process over 100 customer records through automated data validation and standardisation.
- Implemented bulk CSV ingestion and record-level validation to identify missing fields, standardise customer information, and flag incomplete records before processing.
- Automated registration data processing and performance tracking, reducing average processing time from approximately 130 seconds to 0.5 seconds per record.
- Built interactive dashboards to compare manual and automated processing performance and communicate operational efficiency gains.

WORK HISTORY

Bud Infrastructure Limited Lagos, NG
Account Manager (Merchant Operations & Analytics) May 2024 - September 2024; March 2026 - Present

- Analyse transaction data across Nigeria, Kenya, and Ghana to identify processing anomalies, performance trends, revenue changes, and recurring payment issues.
- Generate daily and weekly merchant performance reports by extracting, cleaning, analysing, and visualising operational data to support business decisions.
- Monitor transaction performance and investigate anomalies, collaborating with Engineering, Product, Operations, Customer Success, and Compliance teams to resolve issues.
- Manage relationships with the company's top five merchants while supporting over 30 merchants across multiple African markets.
- Track merchant issues and feedback systematically, contributing to a 20% reduction in unresolved cases through improved tracking and cross-functional collaboration.

Elevation Support Services London, UK
Business Analyst – Sales, Marketing & Customer Service April 2026 - May 2026

- Managed customer enquiries and maintained customer records through HubSpot, ensuring accurate documentation and timely handling of requests.
- Conducted market research and client outreach to identify business opportunities, understand client needs, and communicate relevant service solutions.
- Coordinated staff schedules and availability to support operational planning and service delivery.

Saiket Systems Maharashtra, IN
Business Analyst, Intern September 2025 - October 2025

- Performed exploratory data analysis on customer churn data, identifying key behavioural and demographic factors associated with customer attrition.
- Built predictive analytics dashboards using Python and Plotly to communicate churn trends and customer risk segments to business stakeholders.
- Analysed customer tenure, contract type, payment method, and demographic data to identify high-risk customer segments and recommend targeted retention strategies.

EDUCATION

Covenant University, Ota, Ogun State August 2025
Bachelor of Science in Computer Science (4.24/5.0)
